belief attribution — first of all is a linguistic practice.

BUT: Has been used to hypothesize about psych states + cog processes.

→ Does what psych are doing make sense?

[ME: belief tracking].

Sources in language for emergence of mental state attribution.

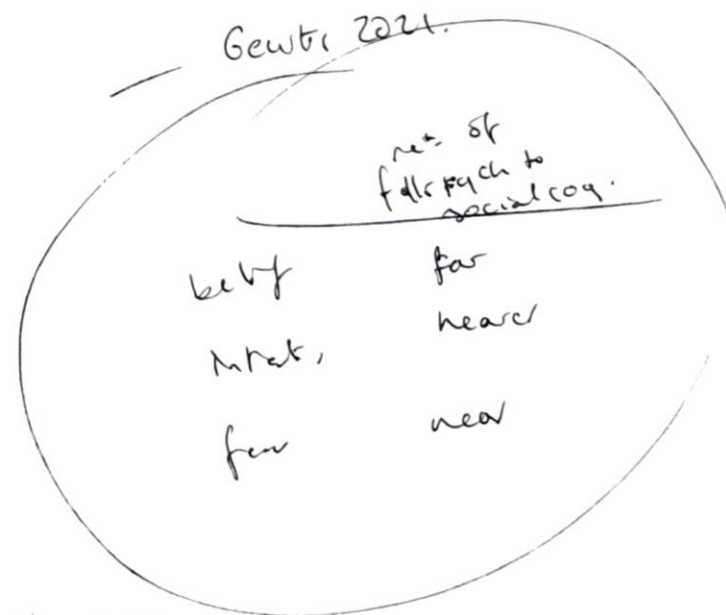

- ↳ primary source is disquotational (saying)
- ↳ likely there are multiple sources.

normative + ascription — emotions have to "fit" your situation.

demanding
(e.g. commitment
requires memory)

practical vs theoretical.

individual - dyed - large collection

Anthropology of ETL Psychology
- Law ppl take about ~~social~~ social, responsibility... Kuba sh f....

Internalization (Vygotsky - sense) - we use certain social routines to organize our own thinking.

self-talk is a special case.

(~~explains~~ is has) has FP
affers SC)

Speculation : FP is a way of extending our narrative repertoire. (Dennett as forgetting)

Q: Why did FP emerge in the first place?

- 1) Link to moral psychology?
- 2) How to get far enough to ask the question?
