

An actinist view of belief attribution

Depending on which type of action you are trying to predict, you will assign different weights to the evidence in attributing a belief.

Also: a desire

Belief in FP is a relational state

Work Christmas dinner

Dinner scenario (predict how things will be)

Predictions

Story

Q: Betty

Q: +

First, Betty's boss, Does she believe Betty's performance?

Promotion scenario

Boss'

every day interaction v. Betty

True

-ve

Boss' annual evaluation of Betty's performance

-ve

True

Word 1

Word 2

Does she desire to keep Betty on her team?

Does she intend to keep Betty on her team?

Q: Do you think Boss will invite her?

Betty should apply for promotion.

Do the same for implicit/explicit

whoever said nothing's impossible obviously never tried to nail jelly to a tree.
