How many trials per subject?

- if too many, becomes repetitive
- could mask this by adding trials with reading stories in between.
- But the mask could somehow be interpreted differently across the cultures.

Corrado - do we use a different questionnaire to identify interdependence?

Aim 1 Demonstrate results are valid across cultures.

(Requires that we use the same task exactly) → incremental.

Aim 2 . Inspiration for studying culture's impact on pre-reflective + reflective moral judgment — which cultural factors are relevant?

↳ we'd also be interested in ~~the~~ which the cultural differences are relevant for moral dilemmas specifically vs non-moral suggestions.

Maybe :

- 1) within family culture vs non-family culture
2 trials only
- 2) subtract family, 0 from of nonfamily "
- 3) compare between groups.
